

Coemar joins White Light Zone @ Plasa 2009

Not just new products this year at Plasa for Coemar. The show will in fact see the official launch of the collaboration with the London-based company **White Light**, which will be joined by Coemar's booth in the "White Light Zone" in Earl's Court 2.

The cooperation will aim at **UK's TV and Theatre markets, for which White Light has been appointed exclusive distributor.**

In the "White Light Zone", booth 2-Q5, Coemar will be presenting to the UK market its entire set of professional and newly developed moving heads: the **Infinity "S" series** (Spot, Wash, ACL), which made their world debut at LDI 2008, and designed to be the next generation of basic moving lights, and the **Infinity "XL" series** with "Plasa Award for Innovation 2007" winner Infinity Wash XL and the new 1500W Infinity Spot XL. Screaming output, amazing features and international patents, are the key words that hide behind the Infinity range.

Also on display will be the innovative LiteLed range, with a fresh addition shown by the new **StageLite Led FX**, introducing the world's first led motorized optical plane (patent pending) with effects control and possibility to individually adjust, focus, dim and colour mix, each of the led bars and cells on the unit.

Plasa09 will also see an important expansion of the already complete **Coemar Catalogue**: the "**Elegance**" series, consisting of 17 new led architectural outdoor products, now gives further depth to the Coemar installation range. Other important additions are represented by the new professional 1500W strobe light, the **C4**, and a high tech toy for the professionals, the **DR1+**, conceived as a display replicator but born as much more than that, which will also be launched on the UK market at Plasa09.

On top of all this, Coemar and White Light will be offering the European preview of the innovative Infinity "M" series, which has been designed to be the next generation of essential moving lights, and gives extraordinary continuity to the logical expansion of the successful Infinity range. Other than the most technologically advanced professional lighting tools, sized in a micro body, the Infinity "M" series (Spot, Wash, ACL) will unveil a brand new "**multi-lamp**" concept.

This key development, following the request of various service providers, allows the unit to be compatible with both 575W and 700W lamps (including energy-saving and future-developed lamps), increasing projects' specifications suitability and thus eliminating the need to stock both models.

∞ Infinity ACL S

A brand new ACL type beam designed to be the next generation of aerial effects generator for stage applications. The **Infinity ACL S** is the world's first moving ACL loaded with proportional beam size control from 6° down to 1.5° and rotating aerial effects. Using a 300W lamp in a small and light body, it delivers an outstanding output comparable to the bigger 1400W units. Split colour beam effects, colour changing via colour wheel and CMY, mechanical and electronic (zap) strobe and a brand new cinema projector effect, also add up to make this unit the next rental must-have. Also Artnet compatible.

∞ Infinity Spot S

A space, weight, and power saving newcomer, the **Infinity Spot S** offers the first truly professional fixture to be sized in a micro body. Designed to be the next generation of basic moving light, this 300W spot has it all to replace both current 575 and 250 units. Comes with one aerial effects wheel (7 effects + open), one break-up wheel (7 break-ups + open), prism wheel for rotating and indexable 3D effects, as well as CTO, colour wheel (5 colours + open), CMY colour mixing system, impressive zoom (7°-36°), iris, a brand new horizontal profile simulator and cinema projector effect. All this, together with the newly engineered low noise ventilation and the most modular and easy servicing design, is what makes this miniature fixture with 575W-like output a one of a kind unit. Also Artnet compatible.

∞ Infinity Wash S

Emitting light brighter than a 575 fixture in a package half the size, this 300W unit features the same patented beam effects as the Infinity Wash XL, with moonflower effect, beam'o effect, and indexable/rotating beam shaper. With a linear zoom range from 24° down to 4°, a CMY colour mixing system, CTO filter, colour wheel, and all-electronic power variables, this silent fixture is sure to fit in every situation. Also Artnet compatible.

∞ Infinity ACL M

The perfect equilibrium achieved on the Infinity ACL S is now brought to the extreme on this newly developed **Infinity ACL M**. Introducing the "multi-lamp" concept, the fixture can mount a 700W lamp and deliver astonishing light beams for the generation of aerial effects on stage.

Comes with color-wheel and CMY, proportional frost, proportional beam size control, mechanical and electronic (zap) strobe, and a brand new cinema projector effect. Also Artnet compatible.

∞ Infinity Spot M

The **Infinity Spot M** offers the most technologically advanced professional lighting tools, sized in a micro body. Designed to be the next generation of essential medium moving lights, this spot introduces the "multi-lamp" concept, being compatible with both 575W and 700W lamps (including energy-saving and future-developed lamps), increasing projects' specifications suitability and thus eliminating the need to stock both models.

Comes with one aerial wheel (7 gobos + open), one break-up wheel (7 gobos + open), 2 rotating prisms, CTO, colour wheel, CMY colour mixing, focus, proportional zoom 13°-50°, proportional frost, iris, dimmer, and with extra features such as a horizontal profile simulator and a cinema projector effect. Also Artnet compatible.

∞ Infinity Wash M

The completeness of the power-saving Infinity Wash S is now pushed up to 700W with the newly developed M series. The **Infinity Wash M** offers, in a small body of just 24Kg, all the professional features needed, plus the same patented beam effects as the Infinity Wash XL, with moonflower effect, beam'o effect, and indexable/rotating beam shaper. Also introducing the "multi-lamp" concept.

∞ Infinity Spot XL

The **Infinity Wash XL** finally meets its newly developed brother: the **∞ Infinity Spot XL**. This 1500W unit accomplishes maximum exploitation of the new light source while giving off unmatched brightness and spectacular morphing effects generated by a whole set of high tech image engine. Superior 7° to 50° zoom, prism, proportional CTO, CMY, colour wheel, iris, mechanical strobe and electronic strobe (zap effect) are all inside this modular, easy-maintenance, easily serviceable designed fixture. Also Artnet compatible.

StageLite Led FX

Also fresh on the market is the **StageLite Led FX**. Introducing the world's first led motorized optical plane with effects control and possibility to individually adjust, focus, dim and colour mix, each of the led bars and cells on the unit (exclusive Coemar patent). This truly unique LED product allows to focus symmetrically or asymmetrically on a cyc, and can be used as a foot wash, as up lighting and as effects unit, all from the same mounting position. A newly developed and patented software guarantees flicker-free operations, while the complete absence of fans allows the unit to be fully silent. Thick aluminum long lasting body, also available in IP65.
